edureka!

Problem Statement:

1. Please find customer's rating data for multiple restaurants as :

```
ratingData = [  
  {restaurant: 'KFC', rating:5},  
  {restaurant: 'Burger King', rating:4},  
  {restaurant: 'KFC', rating:3},  
  {restaurant: 'Domino', rating:2},  
  {restaurant: 'Subway', rating:3}
```

edureka!

```
    {restaurant: 'Domino', rating:1},  
    {restaurant: 'Subway', rating:4},  
    {restaurant: 'Pizza Hut', rating:5}  
  ]
```

- Calculate the Average rating for all the restaurants.
- List of all restaurants with average rating greater than 4.

Expected Response:

```
[{ restaurant: 'KFC', averageRating: 4},
```

```
{ restaurant: 'Burger King', averageRating: 4},  
{ restaurant: 'Domino', averageRating: 1.5},  
{ restaurant: 'Subway', averageRating: 3.5},  
{ restaurant: 'Pizza Hut', averageRating: 5}]
```
